

Meeting Tables Scope

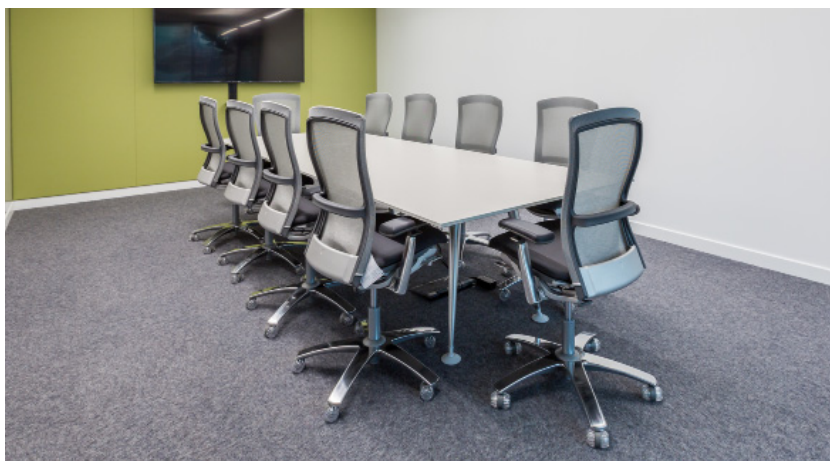

With options for top shape, edge detail, power and data requirements, leg and finish, Scope tables can be specified for many applications, keeping a consistent aesthetic across a project.

Leveraging Scope's considerable kit of parts and a client-specific top shape, Scope tables can work as media tables in multi-function spaces, working as a desk one day, a meeting table the next, or as a media table for idea sharing or conference calls.

Tables can grow, using the same components to create large meeting and conference tables at an extremely competitive price point.

Tables can be “up-specc’d” by the use of finishes and details, such as veneers and chamfered edge details on tops and chrome on the self-levelling legs. Allowing the professional team to target the specific areas where higher quality materials are required.

Scope Meeting Tables

Meeting tables are created using Scope's considerable kit of structural elements. With over twenty years of market experience and development, the structural elements are capable of making tables of virtually any configuration, bringing modularity and flexibility to everyday meeting spaces.

The standard price list covers a number of the typical table dimensions, however, the flexibility of the components and price point make it a useful kit of parts for many other meeting table applications.

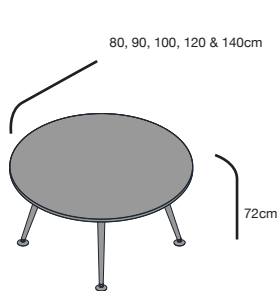

A place to meet, share, collaborate, focus... whatever the requirement, Scope tables give users the places they need for the tasks they do.

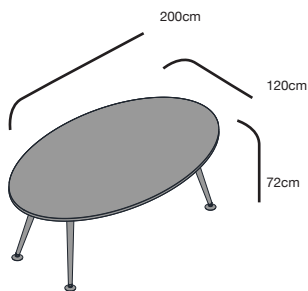

Knoll's Office finishes palette can be used across all its products, giving complete freedom in the application of paints, surface finishes and fabrics. Matching table finishes with storage and seating, bringing harmony and design language across an interior scheme.
